

Tools To Assist With Website Building

Kompozer

A complete web authoring system that combines web file management and easy-to-use WYSIWYG (What You See Is What You Get) web page editing. Kompozer is designed to be extremely easy to use, making it ideal for non-technical computer users who want to create an attractive, professional-looking web site without needing to know HTML or web coding.

That's why I highly recommend Kompozer.

Now For Something Different, “Web Development Offline”.

Xampp

Xampp stands for, cross platform, Apache, MySQL, PHP, Perl. Basically it is a stack package which installs the mentioned items. In other words it aids web development and the plus point here is that Xampp allows you to work on the website offline on your local machine instead of live on the web itself. It is an easy to install package and relatively simple to use if you have some technical knowledge.

If you would like to get more information about this resource then take a look at the link below to a recommended product which will run through how to use Xampp correctly and much more.
