

### Rundown Of Top Recommended Free Zipping Software

When you zip up a file you are reducing the size of a big file to a smaller size allowing you to send or move that file or files easier. Win Zip is the paid for recognised number one program for this but below are some free very good alternatives to consider.

#### 7-Zip

7-Zip Will give you a 10% better compression ratio than the paid for alternative of WinZip. This simply means you can have smaller zip files. You do not need to register in order to use it and can be used on any computer. This is my number one recommendation zipping tool.
